4d SITE INDEX
SI 20 are shown to the nearest metre referenced at 50 years Breast Height Age. SI is based on the age and height of the dominant and co-dominant trees. Site index estimates are inventory age and height, estimated SI is shown after, or replaces the SI.

4e ESTIMATED SITE INDEX
SI is estimated where site index SI trees aren=t present, e.g. young stands (<30yrs). It is denoted by a slash which always precedes the estimated site index. SI values are inventory Type Group and SI Estimated source code.
