4d SITE INDEX

All SI are shown to the nearest metre referenced at 50 years Breast Height Age. SI is based on the age and height of the dominant layer. Where the actual SI is different from the age and height, estimated SI is shown after, or replaces the SI.

4e ESTIMATED SITE INDEX

Site Index estimates are for species whenever present, e.g. Fdc=Douglas-fir where it is assumed to a stand which always provides it. Associated fields in the data base are Inventory Type Group and SI Estimated source code.
