A) SITE INDEX
All SI values are for the named tree referenced at 50 years. Site index is estimated from the species table in the data base. Where available, SI derived from stem analysis is given in preference to age-at-height estimated SI is shown after or replaces the SI.

B) ESTIMATED SITE INDEX
SI is estimated when suitable SI does not exist for the species in the area. SI is estimated from the species table in the data base and denotes SI as Group and SI Estimated source code.
