4d SITE INDEX

All SI are referred to the nearest metre referenced at 50 years
The SI of a stand is based on the age and height of the leading species. When an accurate SI cannot be obtained from age and height, estimated SI is shown after, or replaces the SI.

4e. ESTIMATED SITE INDEX

Estimated site index is used when no accurate annotation present, e.g. young stands (<30yrs) - it is denoted by a dash which divides presence & A associated fields in the data base are Inventory Type Group and SI Estimated source code.
