4d SITE INDEX

All SI are known to the nearest metre referenced at 50 years Breast Height Age. SI is based on the age and height of the dominant trees in the stand. A value of 0 cannot be obtained from age and height, estimated from affin or replaces the SI.

4e. ESTIMATED SITE INDEX

SI is estimated when suitable SI trees aremt present, e.g. young stands (<30y/o). It is denoted by a slash which always precedes it example 21/18. Data in the data base are inventory Type Group and SI Estimated source code.
