4d SITE INDEX

All SI are known to the nearest metre referenced at 50 years breast height age. SI may be derived from stem analysis, sheing leading species, which an accurate SI derived be obtained from age and height; estimated SI is shown after, or replaces the SI.

4e ESTIMATED SITE INDEX

SI is estimated when suitable SI trees are not present, e.g. recently logged areas. SI may be from a nearby site or from site series previous if associated fields in the data base are for entry Type Group and SI Estimated source code.
