4d SITE INDEX
Site Index is the expected tree height attained by dominant trees at 50 years Breast Height Age. SI is based on the age and height of the leading species. When an accurate SI cannot be obtained from age and height, estimated SI is shown after (or replaces the 0).

4e: ESTIMATED SITE INDEX
If a projected value, such as a site curve or overall present, e.g. young trees (<25yrs). It is denoted by a dash which always precedes it. Associated fields in the data base are Inventory Type Group and SI Estimated source code.
