4d SITE INDEX

SI 30 are known to the nearest metre referenced at 50 years breast height age. SI 20 are known to the nearest metre at 50 years bearing species. Where an accurate SI cannot be obtained from age and height, estimated SI is shown after, or replaces the SI.

4e ESTIMATED SITE INDEX

SI is estimated when suitable SI trees are not present, e.g. immature stands, or stands in which the species is not the leading species. Associated fields in the data base are Inventory Type Group and SI if estimated source code.
