4d SITE INDEX
SI is also known to the nearest metre referenced at 50 years Breast Height Age. SI is based on the age and height of the tallest tree in the polygon. SI is derived by a sketch which shows age and height, estimated SI is shown after or replaces the SI.

4e. ESTIMATED SITE INDEX
SI is estimated when suitable SI trees aremiss present, e.g., young stands (<30yrs). It is denoted by a sketch which always accompanies the estimated SI and is stored in the tree inventory type Group and SI Estimated source code.
