4d SITE INDEX

All SI are shown to the nearest metre referenced at 50 years Breast Height Age. SI is based on the age and height of the dominant and co-dominant trees. If the site index is estimated by age and height, estimated SI is shown after or replaces the SI.

4e. ESTIMATED SITE INDEX

SI is estimated when suitable SI trees aren=t present, e.g. Mature stands, Immature stands, Non-forested sites with shrubs. Also provides if Associated Tables in the data base are for inventory Type Group and SI Estimated source code.
