4d SITE INDEX
At SI site trees to the nearest metre referenced at 50 years Breast Height Age. SI is based on the age and height of the leading species. Where an accurate SI cannot be obtained from age and height estimated SI is shown after or replaces the SI.

4e. ESTIMATED SITE INDEX
SI is estimated when suitable SI trees are not present, e.g. young stands (<30b Ht). It is denoted by a slash which always precedes it. Associated fields in the data base are Inventory Type Group and SI estimated source code.
