4d SITE INDEX
Site Index is to the nearest metre referenced at 50 years breast height age. SI is based on the age and height of the leading species. When an accurate SI cannot be obtained from age and height, estimated SI is shown after or replaces the SI.

4e. ESTIMATED SITE INDEX
If a estimated site index is used, the species symbol present, e.g. young stands >10yrs). It is denoted by a dash which always precedes it. Associated fields in the data base are Inventory Type Group and SI Estimated source code.
