4d SITE INDEX
All SI are known to the nearest metre referenced at 50 years Breast Height Age. SI is based on the age and height of the tallest trees in the polygon (usually 100 trees/ha) measured for age and height, estimated SI is shown after,or replaces the SI.

4e. ESTIMATED SITE INDEX
SI is estimated when suitable SI trees are not present, e.g. young stands (<30y/o). It is denoted by a slash which always follows the SI value. The estimated SI values are Inventory Type Group and SI estimated source code.
