4d SITE INDEX
All SI are known to the nearest metre referenced at 50 years Breast Height Age. SI is based on the age and height of the leading species. Where an accurate SI cannot be obtained from age and height, estimated SI is shown after, or replaces the SI.

4e. ESTIMATED SITE INDEX
SI is estimated when subtotal 6.1 has a entry present, e.g. young stands (<30y/o). It is denoted by a slash which always precedes it. Associated fields in the data base are: Inventory Type Group and SI if alternate source code.
