4d SITE INDEX
Site Index is the mean height of the dominant trees at 50 years breast height age. SI is based on the age and height of the leading species. When an accurate SI cannot be obtained from age and height, estimated SI is shown after, or replaces the SI.

4e. ESTIMATED SITE INDEX
Estimated site index is based on site series and/or ecosystem ammoil present, e.g. young stands in Fdc/w1. It is denoted by a dash which always precedes it. Associated fields in the data base are Inventory Type Group and SI Estimated source code.
