4d SITE INDEX

All SI are shown to the nearest metre referenced at 50 years breast height age. Where the species is one of the always leading species, it then an accurate SI cannot be obtained from age and height, estimated SI is shown after, or replaces the SI.

4e. ESTIMATED SITE INDEX

SI is estimated when suitable SI trees aren't present, e.g. young stands, deciduous, etc. Where the species is one of the always previous it is calculated. Refer to the data base for Inventory Type Group and SI Estimated source code.
