4d SITE INDEX

All SI are shown to the nearest metre referenced at 50 years.
Site Index (SI) is the average height of the dominant trees at 50 years breast height age. Where an actual age (A) cannot be obtained from age and height, estimated SI is shown after, or replaces the SI.

4e ESTIMATED SITE INDEX

SI is estimated when outside SI trees cannot present, e.g. Non-Productive Forest (NPF) or Non-Vegetated (NV) areas. Estimated SI is also provided for polygons that have no SI information in the data base and no inventory Type Group and SI Estimated source code.
