4d SITE INDEX

All SI are referred to the nearest metre referenced at 50 years Breast Height Age. SI is based on the age and height of the tallest layer (dominant) trees. (Site Index is estimated from age and height, estimated SI is shown after, or replaces the SI)

4e ESTIMATED SITE INDEX

SI is estimated when suitable SI trees aremt present, e.g. young stands (<30yrs). It is denoted by a dash which always follows the SI number (ex. 20-). Estimated SIs are inventory Type Group and SI Estimated source calls.
