4d SITE INDEX

All SI are known to the nearest metre referenced at 50 years Breast Height Age. SI is based on the age and height of the dominant trees on the polygon. Site Index is the average height of the dominant trees at a specified age (50 years). estimated SI is shown after or replaces the SI.

4e ESTIMATED SITE INDEX

SI is estimated when suitable SI trees aremot present, e.g. young stands. Site Index is the average height of the dominant trees at a specified age (50 years). Estimated SI is shown after or replaces the SI. Associated Note in the data base are mandatory. Type Group and SI Estimated source code.
