4d SITE INDEX

SI 20 are shown to the nearest metre referenced at 50 years Breast Height Age. SI is based on the age and height of the leading species. When an accurate SI cannot be obtained from age and height, estimated SI is shown after, or replaces the SI.

4e. ESTIMATED SITE INDEX

SI is estimated when suitable SI trees are not present in e.g. young stands (<30yrs). It is denoted by a slash which always precedes it. Non-stocked fields in the data base are Inventory Type Group and SI is estimated source code.
