4d SITE INDEX

All SI are shown as the nearest metre referenced at 50 years breast height age. SI is based on the age and height of tree species listed in the Table of Contents. Estimates from age and height, estimated SI is shown after, or replaces the SI.

4e. ESTIMATED SITE INDEX

SI is estimated when no site tree of the major species present, e.g. it is shrubs or herbs. It is denoted by a slash which always precedes it. Associated fields in the data base are Inventory Type Group and SI Estimated source code.
