4d SITE INDEX

All SI are shown to the nearest meters referenced at 50 years breast height age. SI is based on the age and height of the leading species. When an accurate SI cannot be obtained from age and height, estimated SI is shown either, or replaces the SI.

4e ESTIMATED SITE INDEX

SI is estimated when suitable SI trees are not present, e.g. young stands (<10yrs). It is denoted by a slash which conveys precisions it. Associated fields in the data base are Inventory Type Group and SI Estimated source code.
