4d SITE INDEX

All SI are shown to the nearest metre referenced at 50 years breast height age. SI may be estimated using a variety of methods leading to primary, minor and secondary SI derived from age and height, estimated SI is shown after, or replaces the SI.

4e. ESTIMATED SITE INDEX

SI is estimated when suitable SI trees are not present, e.g. non-forested polygons. The SI is derived from the same methods previous it. Associated Note in the data base are the Ecology Type Group and SI Estimated source code.
