4d SITE INDEX

All SI are known to the nearest metre referenced at 50 years Breast Height Age. SI is based on the age and height of the tallest tree species in the polygon. If the species, combination age and height, estimated SI is shown after, or replaces the SI.

4e ESTIMATED SITE INDEX

SI is estimated when suitable SI trees aremit present, e.g. young stands (<30yrs). It is denoted by a 'dash' which always follows the SI Estimated species. Species codes are Inventory Type Group and SI Estimated source code.
