4d SITE INDEX

All SI are shown to the nearest metre referenced at 50 years breast height age. SI is based on the age and height of the dominant and co-dominant trees. SI should be obtained from age and height, estimated SI or, where other, or replaces the SI.

4e. ESTIMATED SITE INDEX

SI is estimated when suitable SI trees cannot present, e.g. young stands (<30y.rs). It is denoted by a slash which always precedes it. Associated Tree Species in the data base are Inventory Type Group and SI if estimated as a code.
