4d SITE INDEX
All SI are shown to the nearest metre referenced at 50 years Breast Height Age. SI is based on the age and height of the leading species. When an accurate SI cannot be obtained from age and height measurements either, or replaces the SI

4e ESTIMATED SITE INDEX
SI is estimated when suitable SI trees aren't present, e.g. young stands or Cc/Sxs. It is identified by a slash which always precedes it. Abbreviations for this data base are inventory type codes and SI Estimated source code.
