4d SITE INDEX

All SI are shown to the nearest metre referenced at 50 years breast height age. Site index curves are based on the dominant leading species. Where an accurate SI cannot be determined from age and height, estimated SI is shown after, or replaces the SI.

4e. ESTIMATED SITE INDEX

SI is estimated when suitable SI trees aren=t present, e.g. non-forested polygons. SI is based on the dominant species provided it. Associated Note in the data base are Inventory Type Group and SI Estimated source code.
