4d SITE INDEX

All SI are known to the nearest metre referenced at 50 years Breast Height Age. SI is based on the age and height of the dominant and co-dominant trees. Where the relationship between age and height, estimated SI is shown after, or replaces the SI.

4e. ESTIMATED SITE INDEX

SI is estimated when available trees are not present, e.g. young stands (<10yrs). It is denoted by a slash which always precedes the SI value (/20). Estimated SI uses Inventory Type Group and SI Estimated source codes.
