4d SITE INDEX
50 SI at reference age, the nearest metre referenced at 50 years
SI 20 at reference age. SI is based on the age and height of the leading species. When an accurate SI cannot be obtained from age and height, estimated SI is shown after, or replaces the SI.

4e ESTIMATED SITE INDEX
Estimated site index is recorded where a dominant, asmrol present, e.g. Hw (Western Hemlock) 4 SI(20). It is denoted by a slash which always precedes it. Associated fields in the data base are Inventory Type Group and SI Estimated source code.
