4d SITE INDEX

All SI are shown to the nearest metre referenced at 50 years breast height age. SI is the site index for the most site index leading species. When an accurate SI cannot be obtained from age and height, estimated SI is shown after, or replaces the SI.

4e ESTIMATED SITE INDEX

SI is estimated when suitable SI trees are not present, e.g., recently logged areas. SI is shown as a slash with always preceded it. Associated fields in the data base are Inventory Type Group and SI Estimated source code.
