4d SITE INDEX

Site index is usually the nearest metre referenced at 50 years
Breast Height Age. SI is based on the age and height of the leading species. When an accurate SI cannot be obtained from measurements a estimate is shown after or replaces the SI.

4e ESTIMATED SITE INDEX

Estimated site index is used when measurements are not present, e.g. young stands (<30yrs). If a site index is not by a start which always precedes it. Associated fields in the data base are Inventory Type Group and SI Estimated source code.
