4d SITE INDEX

All SI are shown to the nearest metre referenced at 50 years Breast Height Age. The species used to derive the SI is the site leading species. When all accurate SI cannot be obtained from age and height, estimated SI is shown after, or replaces the SI.

4e ESTIMATED SITE INDEX

SI is estimated when suitable SI trees arenot present, e.g. Immature stands. The SI is from the nearest base which always precedes it. Associated fields in the data base are Inventory Type Group and SI Estimated source code.
