4d SITE INDEX

All SI are shown to the nearest metre referenced at 50 years breast height age. SI is usually estimated for the primary leading species. When an accurate SI cannot be obtained from age and height, estimated SI is shown after, or replaces the SI.

4e ESTIMATED SITE INDEX

SI is estimated when suitable SI trees aremt present; eg. Mature stands with no SI trees, or young stands. This always provides it. Associated fields in the data base are inventory Type Group and SI Estimated source code.
