4d SITE INDEX
All site trees are to the nearest metre referenced at 50 years breast height age. SI is based on the age and height of the leading leaders. When an accurate SI cannot be obtained from age and height, estimated SI is shown after, or replace the SI.

4e. ESTIMATED SITE INDEX
SI is estimated when available SI trees enrost present, e.g. young stands (<50yrs). It is denoted by a slash which always precedes it. Associated fields in the data base are Inventory Type Group and SI Estimated source code.
