4d SITE INDEX

All SI are shown to the nearest metre referenced at 50 years Breast Height Age. SI is based on the age and height of the dominant and co-dominant trees. If the relationship between age and height, estimated SI is shown after, or replaces the SI.

4e. ESTIMATED SITE INDEX

SI is estimated when suitable SI trees a annot present, e.g. young stands (<40yrs). It is denoted by a stash which always follows the estimated site index. The stash is then Inventory Type Group and SI Estimated source code.
