4d SITE INDEX
All SI are shown to the nearest metre referenced at 50 years breast height Age. The is based on the age and height of the predominant species. When an accurate SI cannot be obtained from age and height, estimated SI is shown after, or replaces the SI.

4e ESTIMATED SITE INDEX
SI is estimated when site tree species are almost present, e.g. pricklies (Pl) only. It is identified by a slash which always precedes it. Associated fields in the data base are Inventory Type Group and SI Estimated source code.
