4d SITE INDEX

All SI are shown to the nearest metre referenced at 50 years breast Height Age. SI is based on the age and height of the dominant trees. Site index is estimated when it is different from age and height, estimated SI is shown after, or replaces the SI.

4e ESTIMATED SITE INDEX

SI is estimated when suitable SI trees aenrot present, e.g. young stands (<30yrs). It is denoted by a slash which always precedes the estimated value. The source codes are Inventory Type Group and SI Estimated source code
