4d SITE INDEX

All SI are shown to the nearest metre referenced at 50 years breast height age. Site trees are selected as the tallest healthy leading species. Where an accurate SI cannot be obtained from age and height, estimated SI is shown after, or replaces the SI.

4e ESTIMATED SITE INDEX

SI is estimated when suitable SI trees arenot present, e.g. recent disturbance. Use of a '+' or '-' indicates a SI range which always precedes it. Associated fields in the data base are inventory Type Group and SI Estimated source code.
