4d SITE INDEX

All SI are shown to the nearest metre referenced at 50 years Breast Height Age. SI is based on the age and height of the dominant trees. Information accurate SI cannot be obtained from age and height. Whenever it is known after, or replaces the SI.

4e ESTIMATED SITE INDEX

SI is estimated when suitable SI trees aren not present, e.g. young stands (<30yrs). SI is denoted by a slash which always precedes it. Assigned estimated SI in the data base are inventory Type Group and SI Estimated source code.
