4d SITE INDEX

All SI are shown to the nearest metre referenced at 50 years breast height age. Site curves are listed by species in which always leading species. When an accurate SI cannot be obtained from age and height, estimated SI is shown after, or replaces the SI.

4e ESTIMATED SITE INDEX

SI is estimated when suitable SI trees are not present, e.g. Recently logged, or young stands. Estimated SI is shown in which always provides it. Associated fields in the data base are the Inventory Type Group and SI Estimated source code.
