4d SITE INDEX

All SI are shown to the nearest metre referenced at 50 years breast height age. Where a site index is based on less than 3 sample trees, or where site index is derived from ages and height, estimated SI is shown after, or replaces the SI.

4e ESTIMATED SITE INDEX

SI is estimated when suitable SI trees arenot present, eg. Non-forested sites. The SI is derived from the site series which always provides it's associated fertility in the data base as the Inventory Type Group and SI Estimated source code.
