4d SITE INDEX

All SI are entered to the nearest metre referenced at 50 years Breast Height Age. SI is based on the age and height of the dominant trees. The source of the SI element be obtained from age and height, estimated SI is shown after, or replaces the SI.

4e ESTIMATED SITE INDEX

An estimated site index (SI) is assigned where permit present, e.g. young stands (<10yrs). It is denoted by a slash which always precedes it. Associated fields in the data base are Inventory Type Group and SI Estimated source code.
