4d SITE INDEX
All SI are known to the nearest metre referenced at 50 years breast height age. SI is based on the age and height of live trees. Site index is estimated from trees measured from age and height, estimated SI is shown after, or replaces the SI.

4e. ESTIMATED SITE INDEX
If a site index is known, actual or trees cannot present, e.g. young stands (<10yrs), it is denoted by a slash which always precedes it. Associated fields in the data base are Inventory Type Group and SI Estimated source code
