4d SITE INDEX

All SI are shown to the nearest metre referenced at 50 years Breast Height Age. SI is based on the age and height of dominant leading species. When an accurate SI cannot be obtained from age and height, estimated SI is shown either, or replaces the SI.

4e ESTIMATED SITE INDEX

SI is estimated when suitable SI trees aren't present, e.g. non-forested areas. The SI is based on the Land Management Handbook 20 procedure 4. Abbreviated fields in the data base are Inventory Type Group and SI Estimated source code.
