4d SITE INDEX

All SI are known to the nearest metre referenced at 50 years Breast Height Age. SI is based on the age and height of the leading species. Site curves accounts SI variation obtained from age and height combinations which, after, or replaces the SI.

4e ESTIMATED SITE INDEX

SI is estimated when suitable SI trees are not present, e.g. young stands (<30yrs). SI is denoted by a slash which always precedes it. Also estimated fields are the data base are Inventory Type Group and SI Estimated source code.
