4d SITE INDEX

All SI are shown to the nearest metre referenced at 50 years Breast Height Age. The SI is based on the age and height of the leading species. When a measured SI is used it replaces the input age and height, estimated SI is shown after, or replaces the SI.

4e ESTIMATED SITE INDEX

SI is estimated when suitable SI trees aremot present, e.g. recent cutblocks. The SI is based on the species with the highest percentage in t. Associated fields in the data base are Inventory Type Group and SI if estimated source code.
