4d SITE INDEX

All Site Indices to the nearest metre referenced at 50 years breast height age. Site Index curves are based on dominant leading species. When an accurate SI cannot be obtained from age and height, estimated SI is shown after, or replaces the SI.

4e ESTIMATED SITE INDEX

SI is estimated when a species SI curve is not present, e.g. young stands (<20yrs.), stands where a slash which always precedes it. Associated fields in the data base are Inventory Type Group and SI Estimated source code.
