4d SITE INDEX

All SI are known to the nearest metre referenced at 50 years Breast Height Age. SI is based on the age and height of the dominant trees. The method used to derive SI can not be determined from age and height, estimated SI is identified after, or replaces the SI.

4e ESTIMATED SITE INDEX

SI is estimated when suitable SI trees are not present, e.g. young stands (<30yrs). It is denoted by a slash which always follows the SI. The species code after the / is the species the inventory Type Group and SI Estimated is/are coded.
