4d SITE INDEX
All SI are shown to the nearest metre referenced at 50 years breast height age. Where a site index curve is not available for the leading species, either a site index curve is derived from age and height, estimated SI is shown after, or replaces the SI.

4e ESTIMATED SITE INDEX
SI is estimated when suitable SI trees cannot present, e.g. because of young age. The species code is the species which drives the estimate. Associated fields in the data base are Inventory Type Group and SI if estimated source code.
