4d SITE INDEX

All SI are shown to the nearest metre referenced at 50 years. Site index curves are from the most recent publication for leading species. When site accuracy SI cannot be obtained from age and height, estimated SI is shown after, or replaces the SI.

4e ESTIMATED SITE INDEX

SI is estimated when suitable SI trees are not present, e.g. young stands, or stands that are killed by a slash which always precedes it. Associated fields in the data base are Inventory Type Group and SI/E estimated source code.
